IBM Watson IoT Platform:

## Python software:

The image shows a screenshot of a Python IDE with two windows. The left window, titled 'Python code sub and publish.py - C:\Users\sarav\OneDrive\Documents\GitHub\Project\_SWM-7\Python code...', contains the following Python code:

```
import time
import sys
import ibmiotf.application
import ibmiotf.device
import random

#provide your IBM watson credentials
organization = "rrrlqlb"
deviceType = "abcd"
deviceId = "12"
authMethod = "token"
authToken = "12345678"

#Initialize GPIO
def myCommandCallback(cmd):
    print("Command received: %s" % cmd.data['command'])
    status=cmd.data['command']
    if status=="lighton":
        print("led is on")
    elif status == "lightoff":
        print("led is off")
    else:
        print("please send proper command")

try:
    deviceOptions = {"org": organization, "type": deviceType, "id": deviceId, "auth-method":
    deviceCli = ibmiotf.device.Client(deviceOptions)
    #.....

except Exception as e:
    print("Caught exception connecting device: %s" % str(e))
    sys.exit()

# Connect and send a datapoint "hello" with value "world" into thecloud as an event of type '
deviceCli.connect()

while True:
    #Get Sensor data from DHT11
    temp = random.randint(90,110)
    hum = random.randint(60,100)

    data= {'temp': temp, 'Humid': hum}
    #print data

    def myOnPublishCallback():
        #.....
```

The right window, titled 'Python 3.7.0 Shell', shows the execution output:

```
Python 3.7.0 (tags/v3.7.0:1bf9cc5093, Jun 27 2019, 04:59:51) [MSC v.1914 64 bit (AMD64)] on win32
Type "copyright", "credits" or "license()" for more information.
